EDUCATION

Michigan State University

B.S., Computer Science

• **Coursework:** DSA, Computer Systems, OOP, Artificial Intelligence

May 2027

East Lansing, MI

SKILLS

- **Languages:** Java, Python, C++, Go, TypeScript, JavaScript, Dart
- **Frameworks, Tools & Front-End Technologies:** React, Next.js, Angular, Node.js, FastAPI, Flutter, Git, SVN, Docker, CI/CD, REST APIs, Agile, HTML5, CSS3
- **Cloud, Databases & Data Formats:** Azure, SQL, MongoDB, Supabase, Firebase, XML, JSON, CSV, ASN.1
- **Concepts:** Distributed Systems, Microservices, Data Structures & Algorithms, OOP, LLM Integration

EXPERIENCE

Delta Dental of Michigan

Software Engineering Intern

May 2025 - Aug 2025

Okemos, MI

- Architected an Azure-hosted LLM microservice inside an enterprise rules engine, automating a manual document-to-rule parsing workflow end to end.
- Re-engineered the TypeScript parsing layer into an async pipeline, cutting staging latency 30% under production load.
- Shipped an Angular AI rule-recommender that accessed internal REST APIs, using GitHub Actions for CI/CD and code reviews, which allowed teams to generate rules more quickly and reduced manual effort
- Processed and normalized structured documents (XML, JSON, CSV) to support rule engine inputs, improving data compatibility across the microservice.

UL Solutions

Systems Engineer Intern

May 2026 - Present

Fremont, CA

- Automated SAR compliance testing for wireless devices using Python scripts that executed tests, validated results, and performed device-level debugging, and managed code changes with SVN, which shortened the testing cycle and improved accuracy
- Delivered structured engineering reports on instrumentation data to senior staff and enterprise customers during device certification, using Python and SQL to aggregate and visualize results, which enabled faster decision-making and shortened the certification review process
- Collaborated on design discussions for enhancing testing framework features following agile practices.

MSU College of Engineering

Software Engineering Intern

Sep 2024 - Present

East Lansing, MI

- Built and shipped React.js/Next.js web apps using HTML5, CSS3, and JavaScript, migrating 15+ legacy templates to a WCAG-compliant system.
- Manage frontend CI/CD pipelines with GitHub Actions, handle QA triage, and coordinate production releases, which reduced deployment time by 30% and kept system uptime at 99.9% on an agile team
- Collaborated in agile ceremonies and design discussions, contributing front-end and back-end insights to enhance application features.

PROJECTS

FleetPulse | [FleetPulse](#)

- Built a fleet-telemetry platform that simulates 50 vehicles streaming GPS, diagnostics, and alerts in real time.
- Used concurrent Go workers for ingestion, holding 500+ writes/sec with no data loss under load testing.
- Added alert-prioritization logic so critical faults surface ahead of routine noise.
- Built live dashboards with JavaScript (Leaflet, Chart.js), HTML5, and CSS3 to track fleet health and catch anomalies at a glance
- Leveraged Git for version control to manage code releases and collaborate on development

Attendance Forecast PWA | [Attendance Forecast PWA](#)

- Built a production PWA that 70 students use to track attendance and forecast their absence risk across lectures and labs.
- Wrote the forecasting logic that shows how upcoming absences push a student toward or past eligibility cutoffs, replacing their old spreadsheets.
- Set up Supabase Auth with a PostgreSQL database and Edge Functions to securely store and query attendance records using SQL and JSON
- Added scheduled jobs and Web Push so students get a heads-up before their attendance drops too low.
- Used Git in an agile workflow to track changes, perform code reviews, and maintain documentation

Campus Menu | [Campus Menu](#)

- Shipped a cross-platform app which aims 20,000+ MSU students to check dining menus across 10+ campus locations.
- Added nutrition info and dietary filters so students can quickly find food that fits their needs.
- Built the backend on Supabase with REST APIs to keep menus updating instantly, even during meal-time rushes.
- Published to the Apple App Store and kept refining the app around real student feedback.

LEADERSHIP

Google Developer Groups, MSU | *Co-Lead*

Jul 2024 - Jul 2025

- Directed 25+ workshops and hackathons, engaging 200+ students in hands-on software engineering and emerging tech.
- Partnered with faculty and sponsors to coordinate events, outreach, and GDG executive strategy
